PROFESSIONAL SUMMARY

Full-stack Junior Software Developer (PHP, .NET, React/TypeScript) who uses AI coding assistants (Claude, Codex, ChatGPT) daily as a force multiplier for fast, production-ready “vibe coding” — while keeping architecture and logic self-directed. Delivered a BIR-compliant accounting integration, an NSSM-based service that automates tech-support triage across client deployments, and a microservice syncing on-premise and cloud data via REST APIs, DynamoDB, and S3.

EXPERIENCE

Servo IT Solutions, Angeles City, Pampanga
Junior Software Developer

May 2025 – Present

- **Shipped Xenia Online**, a background microservice syncing reservation data between on-premise and cloud servers for guest pre-arrival and online check-in, integrating with DynamoDB via REST/HTTP APIs in C#/.NET.
- **Built Halo Protocol**, a lightweight background service (run via NSSM) that eliminates repetitive tech-support work by automatically running a diagnostic query across every client deployment whenever a critical bug is identified — cutting manual per-client triage time.
- **Built and integrated a Node.js image-upload service** with RESTful APIs to store user-submitted files in AWS S3, centralizing data from multiple sources into the sync pipeline.
- **Use AI coding assistants (Claude, Codex, ChatGPT) daily** to accelerate full-stack implementation — writing backend APIs, refactoring UI, and debugging faster — while keeping logic, architecture, and code-quality decisions self-directed rather than AI-dictated.
- **Refactor React/TypeScript UI components** for consistency and maintainability, and reduce load time and technical debt through targeted backend refactoring.
- **Participate in Agile sprint planning, code reviews, and cross-team collaboration**, communicating progress and blockers proactively.

Servo IT Solutions, Angeles City, Pampanga
Associate Software Developer

Jun 2024 – May 2025

- **Delivered the Compliance Accounting System (CAS) integration** (PHP, JavaScript, jQuery) connecting the web app to the Accounting System for BIR tax compliance — a client-facing, production feature generating Sales Journal Entries, Receipt Journal Entries, and receipts used live across the client base.
- **Built responsive, reusable front-end components** (HTML, CSS, JavaScript) for the Banquet System UI, prioritizing simple, maintainable component design.

Servo IT Solutions, Angeles City, Pampanga
Software Developer Intern

Feb 2024 – May 2024

- **Retained as a full-time hire** after this final-year OJT/internship, based on performance and demonstrated potential.
- **Set up a Git-based CI/CD pipeline** (reducing deployment steps by 50%) and assisted in building on-premise backend services and debugging/testing for the Banquet System.

TECHNICAL SKILLS

- **AI-Assisted Development:** Daily hands-on use of Claude, Codex, and ChatGPT for accelerated (“vibe coding”) implementation; comfortable adopting new AI coding tools such as Claude Code — pairing AI-assisted speed with self-directed, maintainable architecture and code review.
- **Languages & Frameworks:** PHP, JavaScript, TypeScript, C#, .NET, HTML5, CSS3, jQuery, Node.js, React.js
- **APIs & Integrations:** REST/HTTP API design and integration, third-party service integration, on-premise ↔ cloud data synchronization
- **Data Layer:** MySQL (joins, temporary tables, stored procedures), NoSQL (DynamoDB), clean schema design, centralizing data from multiple sources
- **Cloud:** AWS S3, DynamoDB
- **Tools & Practices:** Git, GitHub, GitHub Actions (CI/CD), Agile/Scrum, Postman, Chart.js, AJAX, Bootstrap
- **OS:** Windows

EDUCATION

Pampanga State Agricultural University, Magalang, Pampanga
Bachelor of Science in Information Technology (BSIT)

Sep 2020 – Jun 2024

Completed final-year internship at Servo IT Solutions (Feb–May 2024); retained full-time based on performance.
